Design Recipe: find-area

Define a function called find-area, which consumes an image and returns its area. Assume the area of an image is its width multiplied by its height.

Contract+Purpose Statement
Every contract has three parts:

# name : Domain -> Range

# What does the function do?

Give Examples
Write examples of your function in action

examples:

________(________________________) is the user types...

______________________________

...which should become

______________________________

________(________________________) is the user types...

______________________________

...which should become

end

Function
Circle the changes in the examples, and name the variables.

fun ________________(________________): 

end
